Lantern Pole Construction

Lanterns are utilized during the second year of the program. Please take time to construct a lantern pole that is functional and safe to handle. You can purchase a Y Guides kerosene lantern at your Fall Outing weekend. We will provide the kerosene for the lantern. We hope you will continue to use your lantern any time you have a campout. Remind your Guide to treat fire with respect. Always supervise the handling of the flame with your child.

SUPPLIES NEEDED:

- 1/16" drill bit
- Drill
- Replacement broom handle
- 1 Eye hook (supplied in 2nd year kit)
- 1 Carabiner (supplied in 2nd year kit)

Steps to building your Y Guides lantern:

STEP 1: Using the 1/16" bit and electric drill, pre drill a hole about 1" from the end of the broom handle. Do not go all the way through the handle.

STEP 2: Insert the eye hook into the predrilled hole. Tighten until snug.

STEP 3: Attach the carabiner to eye hook.

STEP 4(optional): Decorate broom handle with tape, paint, etc.
